                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ARK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cartivity, and can be used in gene therapy and vaccine production. (I) crosselins and polynucleotides may be used in the prevention, diagnosis and carment of diseases associated with inappropriate (I) expression. For cexample, they may be used to treat disorders associated with decreased cytostated the activity of (I) by expression in a patient's genome cuplement the patients own production of (I). Additionally, (I) cytostated may be used to produce the secreted (I), by inserting cytostated acids into a host cell and culturing the cell to express the concert and cancer metastases of haematopoietic diseases, especially cancers and cancer metastases of haematopoietic antigen genomic con ARK8794 represent human immune/haematopoietic antigen genomic con ARK8794 represent invention. ARK54942 to ARK87950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis are treatment of diseases associated with inappropriate (I) expression. For

Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic acitis and polynucleotides may be used to prevent cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK64920 and AAK82169
A computer readable medium has been developed which has 982 nucleotide sequences isolated from the Enterococcus

    used to develouse in vaccines
infection.

The computer based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences infertion
